WORKSHOPS

SAA workshops provide continuing education on a wide range of practical issues relevant to the professional archaeological community. These workshops have limited enrollments, so sign up soon! As noted, specific workshops are open to both meeting attendees and those not attending the meeting. Note the special reduced fees for student attendees!

FRIDAY, APRIL 16

Introduction to Video Production for Archaeologists

8:00 am–12:00 pm; maximum 30 persons; \$79 SAA annual meeting attendees; \$59 student meeting attendees; \$99 non-annual meeting attendees (Sponsored by the Public Education Committee)

This very basic introductory workshop will introduce participants to useful tips and tools on how to plan, produce, and ultimately publish archaeological videos online. The workshop will include demonstrations of video production hardware and software, sample videos, and tips and techniques from *The Archaeology Channel*.

Facilitators: Donna Byczkiewicz, San Diego State University, Richard Pettigrew Archaeological Legacy Institute, and Renata B. Wolyneć, Edinboro University of Pennsylvania

Soil Chemistry Archaeochemical Workshop

8:00 am–12:00 pm; maximum 30 persons; \$79 SAA annual meeting attendees; \$59 student meeting attendees; \$99 non-annual meeting attendees

Chemistry has always been an effective tool for the modern archaeologist. With the development of new technology, chemical analysis is becoming increasingly easier, cheaper, and thus more important. This workshop is designed to give the practicing archaeologist a basic working understanding of the chemical principles that are applicable and specific to archaeology. The class is targeted to those who have no previous background in chemistry. Topics covered: “Elements and Molecules, or What is That Stuff Anyway?” “Chemical Statistics or Understanding All That Gibberish That Came Back From the Lab,” and “Soil Chemistry or “Getting Information When You Can’t See a Thing.” Topics will be presented in a combination of lecture and hands-on demonstrations. Participants are encouraged to bring their own specimens for non-destructive analysis. The specimens should be solids (not liquids) and about 10 grams of material or a surface area about 3/4-inch square. On site there will be portable X-

Ray Fluorescence (XRF), simple pH devices and possibly other portable field equipment.

Instructors: Dr. Claudia L. Brackett, Country Chemist and Richard J. Lundin, Director, Wondjina Research Institute
